 *Je ne suis pas un designer*

“ When designing computer systems, one is often faced with a choice between using a more or less powerful language for publishing information, for expressing constraints, or for solving some problem. This finding explores tradeoffs relating the choice of language to reusability of information. The "Rule of Least Power" suggests choosing the least powerful language suitable for a given purpose.

1. Texte
2. HTML (sémantique) & CSS (layout, style, animations simples)
3. SVG (formes et animations complexes)
4. JavaScripts

⚠️... mais il y a toujours de bonnes raisons pour ne pas suivre ces règles

Utiliser un pré-processeur ?

```
button {  
  background: lightblue;  
  border: medium solid purple;  
}  
button.danger { /*  
  background: salmon;  
  color: rebeccapurple; */  
}
```

Alors utilise-t-on un pré-processeurs ?

Unités

➡ CommitStrip <<http://www.commitstrip.com/fr/2016/10/10/a-story-about-css-units/>>

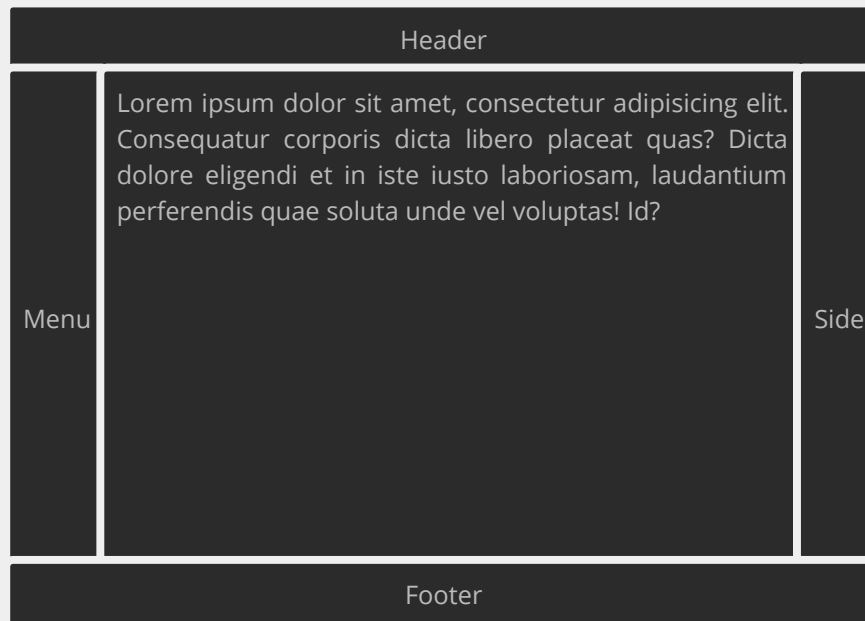

px, cm, pt, ...	longueurs absolues (mesure physique)
em, rem	fonction de la font-size
ex, ch	hauteur d'un x, largeur d'un 0
vh, vw	(100vh, 100vw) = (hauteur, largeur) du <i>viewport</i>
vmin, vmax	$\min(1vh, 1vw)$, $\max(1vh, 1vw)$
